## SESSION 247

# Subarachnoid Hemorrhage - An Overview

This session aims to give a brief overview on subarachnoid hemorrhage. We will focus on patient identification, testing and parameters for diagnosis as well as management of the patient with subarachnoid hemorrhage and the complications that can arise in the acute phase.

1. Increase comfort with identifying those patients who require a workup for SAH.
2. Provide a clear schematic on how to work up SAH, which tests to order and when.
3. Management of SAH and the possible complications that can arise.
