Dr. Zachary Kuehner

SESSION 365

Famous FAST Words: Bedside Ultrasound in Trauma Patients

Focused Assessment with Sonography in Trauma (FAST) is one of the original (and still most useful) applications of bedside ultrasound. Participants will review indications, probe selection, knobology, and image generation techniques for the abdominal FAST exam, with the majority of time dedicated to hands on learning and troubleshooting techniques.

1. Review indications for FAST exam and integration in patient management.
2. Demonstrate appropriate FAST exam.
3. Develop PoCUS skill in FAST exam.
