

ADHD: Evidence Based Assessment & Management in Primary Care

**Dr. Joan Flood**

Family Physician, The Shoniker Clinic,
Scarborough

Board Member, The Canadian ADHD Resource Alliance
(CADDRA)

Chair, Advocacy Committee, CADDRA

1

Disclosures

Dr. Joan Flood

Honoraria, speaker fees, and unrestricted educational grants from
the following companies:

- Purdue
- Janssen Ortho
- Shire-Takeda

***No financial or in-kind support has been received for this program**

2

Disclosure of Commercial Support

The Dept. of Family and Community Medicine rounds are made possible in part from pooled resources of unrestricted educational grants from

- AstraZeneca Canada Inc., Eli Lilly Canada Inc., Galderma Canada Inc. , Valeant Canada, Pediapharm.

Potential for conflict(s) of interest:

- Dr. Joan Flood will receive a small honorarium from the Department of Family and Community Medicine at the Scarborough Health Network
- Dr. Flood has received payment or funding from the organizations whose product(s) are being discussed in this program but not with respect to this presentation

3

Mitigating Potential Bias

- The organizers of this program select presentation topics based on the results of a needs assessment carried out every year. The speakers are asked to present information from the guidelines, that are based on evidence and expert opinion.
- The presenter of this program will discuss a variety of therapies, and will aim to use generic names and provide supporting evidence/references.

4

Learning Objectives

At the conclusion of this activity, participants will be able to:

- 1. Identify common misperceptions about ADHD that prevent many primary care physicians from confidently treating ADHD.
- 2. Apply 2018 Canadian ADHD Practice Guidelines to the assessment and management of ADHD in primary care
- 3. Review ADHD cases that are common presentations in Primary Care.

5

Canadian ADHD Practice Guidelines
Fourth Edition

6

Diagnostic and Statistical Manual (DSM-5) Presentations

**INATTENTIVE
PRESENTATION**
6 of 9* symptoms
are required from
Criteria A1

**HYPERACTIVE-IMPULSIVE
PRESENTATION**
6 of 9* symptoms
are required from
Criteria A2

**COMBINED
PRESENTATION**
6 out of 9*
symptoms are
required from
Criteria A1 + 6 out of 9*
symptoms are
required from
Criteria A2

*Total number of symptoms are less in adults (17+): 5 of 9 instead of 6 of 9

7

Be Open to the Diagnosis of ADHD

- ADHD presents in many ways and if you limit your definition to the idea that it is the boy who misbehaves and underachieves in school then you will miss many in your practice.
- If you think you can pick up ADHD by how a person appears in a single session, you will miss it more times than not.
- ***Plus, ADHD isn't just a disorder that affects kids...***

8

9

Why treat ADHD?

- ADHD is a medical disorder with serious impairments just as in diabetes and cardiovascular disease
- As primary care physicians, we treat Depression, Bipolar illness, Anxiety – why aren't we treating ADHD?

Don't underestimate the cost of NOT TREATING!

10

What is ADHD?

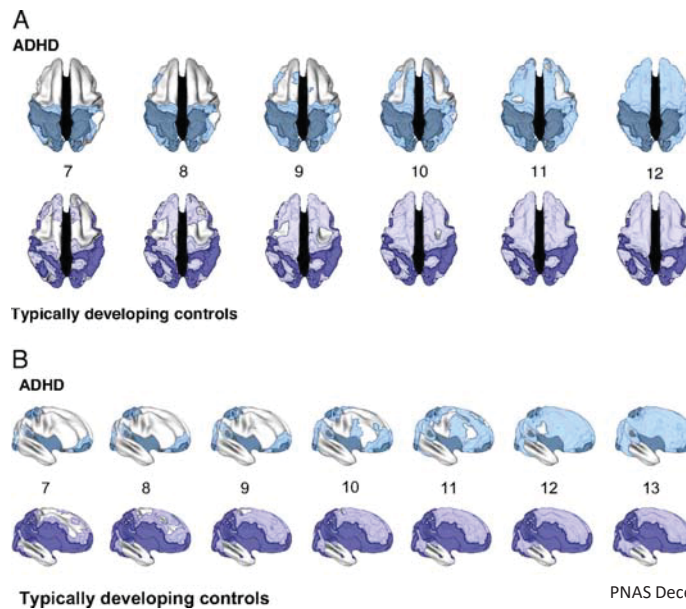

- A neurodevelopmental disorder with diverse symptomatology around the key factors of inattention, impulsivity, hyperactivity and emotional dysregulation.
- Affects 5-9% of children and 3-5% of adults worldwide

11

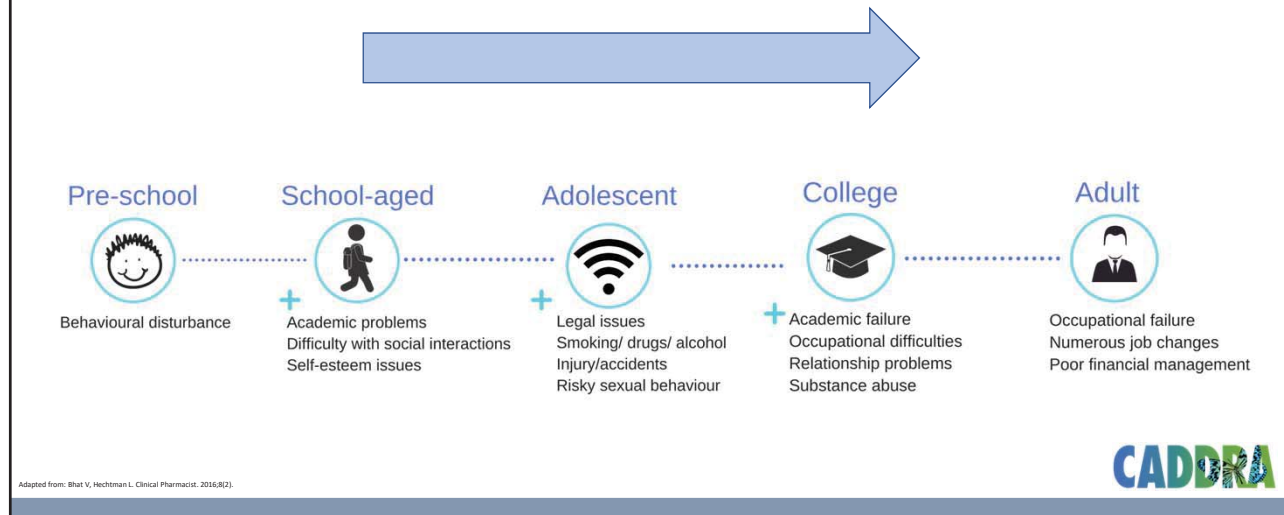

ADHD is characterized by a delay in cortical maturation

PNAS December 4, 2007 104 (49) 19649-19654

12

Developmental Impact

13

ADHD and Comorbidity

- 50-90% of children with ADHD have at least one other comorbid disorder (e.g. ODD, anxiety, depression, autism, learning disabilities)
- 85% of adults meet the criteria for a comorbid disorder (e.g. anxiety, depression, bipolar disorder, conduct disorder, substance abuse, borderline personality disorder)
- ***The point here is that ADHD may be the underlying cause of many of these disorders that you are already treating!***

Kessler RC, et al. *Am J Psychiatry*. 2006;163:716-723.
 Cumyn L et al. *Can J Psychiatry*. 2009;54(10):673-683

CADDRA

14

Myth??

- ADHD is overdiagnosed and overmedicated

15

ADHD in Canada 2016

| | ADHD (ages 5–19) | ADHD – Adults (ages 20–64) |
|-------------------------------------|---------------------|-------------------------------|
| Total Population <i>(estimates)</i> | 5,915,466 | 22,222,004 |
| Prevalence [%] | 6% | 4.4% |
| Patients with ADHD | 354,927 | 977,768 |
| % Diagnosed & Treated | 33% | 7% |
| Patients Diagnosed & Treated | 117,126 | 68,444 |
| How many adults are left untreated? | | 909,324 |
| How many Children? | | 237,801 |

Kessler RC et al. Am J Psychiatry 2006; Statistics Canada, 2016. % diagnosed calculated based on estimate of treated patients in Canada

16

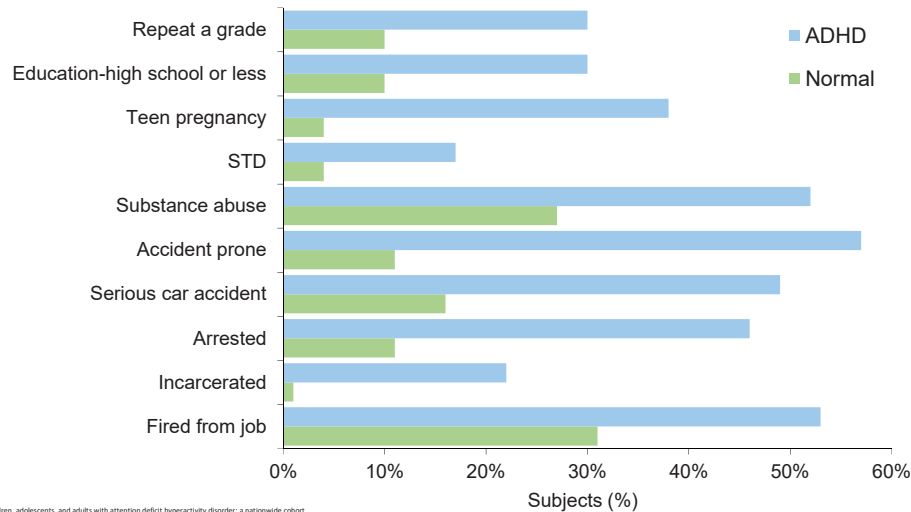

Myth??

- ADHD is not that big a deal – just pay attention and you'll be fine!
- Hey - you're a guy so that's normal.

17

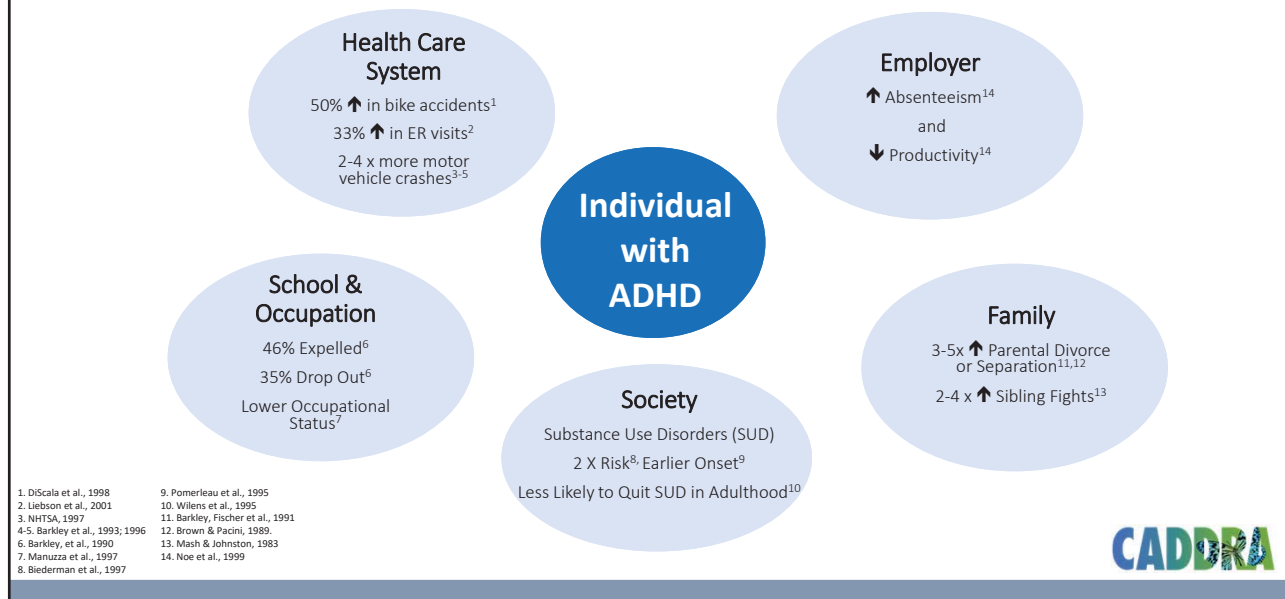

Functional Impacts of ADHD

Dalsgaard, S., et al., Mortality in children, adolescents, and adults with attention deficit hyperactivity disorder: a nationwide cohort study. *Lancet*, 2015, 385(9933): p. 2190-2196

18

Impact of Inadequately Treated ADHD

19

Mortality Rate Ratio

ADHD = Attention Deficit Hyperactivity Disorder; CD = Conduct Disorder; ODD = Oppositional Defiant Disorder; SUD = Substance Use Disorder. Dalsgaard S et al. Lancet 2015; 385: 2190-96.

20

Myth??

- You can't have ADHD if you're smart and have good grades

21

Myth??

- Psychological testing is required to diagnose ADHD

22

Essentials of Diagnosis

- Clinical interview that identifies not only **current challenges** but also examines **past functioning, developmental history, academic/vocational history, social functioning, medical history and family history**
- Attention to presence of **co-morbid disorders**: Oppositional Defiant Disorder, Anxiety, Dysthymia, Depression, Autism...

23

Screening Tools

The CADDRA e-Toolkit provides several assessment forms to screen for general mental health challenges as well as the specific impairments associated with ADHD.

Children

SNAP-IV, WFIRS-P, CADDRA Teacher Assessment form

Adolescents

ASRS, WFIRS-S, WFIRS-P, Teacher Assessment form

Adults

ASRS, WFIRS-S

24

Myth??

- Behavioural interventions are not indicated since research has shown no significant effects on ADHD core symptoms

25

26

Myth??

- When medicating for ADHD, start with a low-dose, short acting stimulant

27

Medication Management

- **First-line treatments: methylphenidate or dexamphetamine**
 - Use long acting NOT short acting meds
 - Start at a low dose and titrate upwards
 - Consider method of administration (capsule or dissolvable) and duration of action
- **Second-line treatments: atomoxetine, guanfacine, clonidine**
 - Option for patients who do not tolerate or respond to first-line treatment – often an add-on to the stimulant
 - *Be sure that you have optimized first-line agents before commencing second-line treatments*

Challenge: Medication coverage is not equal across the country

28

| CADDRA Guide to ADHD Pharmacological Treatments in Canada - 2018 | | | | | |
|---|--|---------------------------------|--|--|--|
| Medications available and illustrations | Characteristics | Duration of action ¹ | Starting dose ² | Dose titration as per product monograph | Dose titration as per CADDRA www.caddra.ca |
| AMPHETAMINE-BASED PSYCHOSTIMULANTS | | | | | |
| Dexedrine® Tablets 5 mg  | Pill can be crushed. ³ Spanule (not crushable) | ~ 4h | Tablets = 2.5 to 5 mg BID Spanules = 10 mg q.d. a.m. | ↑ 2.5 - 5 mg at weekly intervals. Max. dose/day: (q.d. or b.i.d.) All ages = 40 mg | ↑ 2.5 - 5 mg/day at weekly intervals Max. dose/day: (q.d. or b.i.d.) Children and Adolescents = 20 - 30 mg Adults = 50 mg |
| Adderall XR® Capsules 5, 10, 15, 20, 25, 30 mg  | Sprinkable Granules | ~ 12h | 5 - 10 mg q.d. a.m. | ↑ 5 - 10 mg at weekly intervals Max. dose/day: Children = 30 mg Adolescents and Adults = 20 - 30 mg | Children ↑ 5 mg at weekly intervals Max. dose/day = 30 mg Adolescents and Adults ↑ 5 mg at weekly intervals max. dose/day = 50 mg |
| Vyvanse® capsules 10, 20, 30, 40, 50, 60, 70* mg  | Capsule content can be diluted in water, orange juice and yogurt | ~ 13-14h | 20 - 30 mg q.d. a.m. | ↑ by clinical discretion at weekly intervals Max. dose/day: All ages = 60 mg | ↑ 10 mg at weekly intervals Max. dose/day: Children = 60mg Adolescents and Adults = 70 mg |
| METHYLPHENIDATE-BASED PSYCHOSTIMULANTS | | | | | |
| Methylphenidate short acting, tablets 5 mg (generic), 10, 20 mg (Ritalin®)  | Pill can be crushed. ³ | ~ 3 - 4 h | 5 mg b.i.d. to t.i.d. Adult = consider q.i.d. | ↑ 5 - 30 mg at weekly intervals Max. dose/day: All ages = 60 mg | ↑ 5 mg at weekly intervals Max. dose/day: Children and Adolescents = 60 mg Adults = 100 mg |
| Biphentin® Capsules 10, 15, 20, 30, 40, 50, 60, 80 mg  | Sprinkable Granules | ~ 10 - 12 h | 10 - 20 mg q.d. a.m. | ↑ 10 mg at weekly intervals Max. dose/day: Children and Adolescents = 60 mg Adults = 80 mg | ↑ 5 - 10 mg at weekly intervals Max. dose/day: Children = 60 mg Adolescents and Adults = 80 mg |
| Concerta® Extended Release Tabs 18, 27, 36, 54 mg  | Pill needs to be swallowed whole to keep delivery mechanism intact | ~ 12h | 18 mg q.d. a.m. | ↑ 18 mg at weekly intervals Max. dose/day: Children = 54 mg Adolescents = 54 mg / Adults = 72 mg | ↑ 9 - 18 mg at weekly intervals Max. dose/day: Children = 72 mg Adolescents = 90 mg / Adults = 108 mg |
| Fogose® Capsules 25, 35, 45, 55, 70, 85, 100 mg  | Sprinkable Granules | ~ 16 h | 25 mg q.d. a.m. | ↑ 10-15 mg in intervals of no less than 5 days Max. dose/day: Adults = 100 mg | ↑ 10-15 mg in intervals of no less than 5 days Max. dose/day: Adults = 100 mg |
| NON PSYCHOSTIMULANT - SELECTIVE NOREPINEPHRINE REUPTAKE INHIBITOR | | | | | |
| Strattera® (Atomoxetine) Capsules 10, 18, 25, 40, 60, 80, 100 mg  | Capsule needs to be swallowed whole to reduce GI side effects | Up to 24h | Children and Adolescents: 0.5 mg/kg/day Adults = 40 mg q.d. for 7-14 days | Maintain dose for a minimum of 7 - 14 days before adjusting. Children = 0.8 then 1.2 mg/kg/day 70 kg or Adults = 60 then 80 mg/day Max. dose/day: 1.4 mg/kg/day or 100 mg | Maintain dose for a minimum of 7 - 14 days before adjusting. Children = 0.8 then 1.2 mg/kg/day 70 kg or Adults = 60 then 80 mg/day Max. dose/day: 1.4 mg/kg/day or 100 mg |
| NON PSYCHOSTIMULANT - SELECTIVE ALPHA-2A ADRENERGIC RECEPTOR AGONIST | | | | | |
| Intuniv XR® (Clonidine XR) Extended release tabs 1, 2, 3, 4 mg  | Pills need to be swallowed whole to keep delivery mechanism intact | Up to 24h | 1mg q.d. (morning or evening) | Maintain dose for a minimum of 7 days before adjusting by no more than 1mg increment weekly Max. dose/day: Monotherapy: 6-12 years = 4 mg, 13-17 years = 7 mg As adjunctive therapy to psychostimulants: 6-17 years = 4 mg | Maintain dose for a minimum of 7 days before adjusting by no more than 1mg increment weekly Max. dose/day: Monotherapy: 6-12 years = 4 mg, 13-17 years = 7 mg As adjunctive therapy to psychostimulants: 6-17 years = 4 mg |

Note: Illustrations do not reflect real size of pills/capsules. For specific details on how to start, adjust and switch ADHD medications, clinicians are invited to refer to the Canadian ADHD Practice Guidelines (www.caddra.ca)
¹ Pharmacokinetics and pharmacodynamic response vary from individual to individual. The clinician must use clinical judgment as to the duration of efficacy and not solely rely on reported values for PK and duration of effect.
² Starting doses are from product monographs. CADDRA recommends generally starting with the lowest dose available. ³ Higher abuse potential. * Vyvanse 70 mg is an off-label dosage for ADHD treatment in Canada.
 Document developed by Amick Vincent MD (www.attentiondeficit.info) and Dr. Jean Desrosiers MD (www.caddra.ca) with the special collaboration of CADDRA.

29

Myth??

- ADHD medications are dangerous and have lots of cardiac risks! Only specialists should prescribe them.

30

Side Effects

- **Loss of appetite** – eat breakfast!
- **Insomnia** – usually settles with good sleep hygiene and avoidance of ‘screens’ in the hour before bed
- **Headaches** – transient – simple analgesics and hydration are helpful
- **Mood/anxiety** – will respond to a change in medication if due to medication

Contrary to popular belief, cardiac effects are minimal – equivalent to running up a flight of stairs. There is no need for an EKG or cardiac workup unless there is a family history of sudden cardiac death in the young or known serious heart disease.

31

Myth??

- ADHD medications increase the risk of drug abuse.

32

ADHD & Substance Use/Diversion

- Substance Abuse increases if ADHD is comorbid with *Early Cigarette Smoking*
- Substance Abuse is *less* if ADHD is treated from an early age
- Diversion is a risk with *short-acting* meds

33

Myth??

- Therapeutic drug holidays are recommended during school, holiday or weekend breaks.

34

Myth??

Other effective treatments include:

- neurofeedback
- cognitive training
- food supplements
- omega 3/6 fatty acids
- avoiding sugar & red food dye

35

Take-home Messages

- Despite common belief, ADHD is *underdiagnosed*
- Effective management of ADHD includes:
 - ✓ Education
 - ✓ Parent/patient counseling
 - ✓ Behavioural, psychosocial, and pharmacological treatments
- Long-acting stimulants are recommended as first-line therapy
- Monitoring and optimization of medication is important throughout the lifespan
- Remain vigilant for the presence of co-morbidities which may emerge over time, and consider referral to a specialist if you're stuck

36

You can manage ADHD in Primary Care and markedly improve the lives of your patients with ADHD – treatment of ADHD is truly life changing!
