

X-RAYS YOU WISH YOU NEVER MISSED — PART 2

A review of X rays taken over the years from various rural sites displaying a wide variety of interesting, important, and often easy to miss findings. As well, this tour includes a gallery of possibly X rays less pertinent to our practice, but still strange and entertaining.

1. Develop a systematic approach to the evaluation of X rays. 2.) Acquire skills in detecting subtle findings. 3. Build on skills in evaluating X rays mostly replaced by CT in larger centres but still necessary in rural and remote sites. 4. Enjoy strange findings that rural X ray life sometimes brings us.
