TOOLS FOR PRACTICE JEOPARDY

In this talk (where the audience chooses the topics), a fast-paced review of common clinical questions will occur. For each answer the audience will be asked to consider a true or false question and then one of the presenters will review the evidence and provide a bottom-line answer.

1. To quickly review the evidence pertaining to a multitude of common primary care clinical questions
2. To use the evidence to reaffirm or reconsider one's current practice pertaining to that clinical question
3. To appreciate potential bias in previous (and current) evidence
